

# WOLFF R-LINE - THE NEW WAY OF RENTAL

With the WOLFF Rental Line, we are breaking new ground for construction machinery rental. In this context, the machine portfolio has been specially adapted to the needs of rental companies. The focus of our R-Line machines is on the efficient and productive removal of floor coverings and preparation of subfloors.

In order to make handling as easy as possible for construction machinery rental companies and their customers, the explanation and instruction of a WOLFF R-Line machine is completed in just a few minutes and the craftsman can get started right away.

To make the transport of the machines even safer and easier, all our R-Line machines are equipped with permanently installed transport eyes. With these, carrying loops can be attached directly to the machine and secured for transport. In addition, there are no more loose parts on the machines that could come loose during the work process.

In order to be able to present that special „something“, all machine variants are available in freely selectable colours. Thus, company colours representing a company on the market can be easily and quickly reproduced on the R-Line products. Since its foundation in 1954, WOLFF has been standing for innovative and high-quality products. We have transferred this DNA to our WOLFF R-Line and look forward to further exciting projects.
